

COMPILER DESIGN LAB ASSIGNMENT - WEEK 6

1. Implement Recursive Descent Parser for the Expression Grammar given below.

$E \rightarrow TE'$
 $E' \rightarrow +TE' \mid \epsilon$
 $T \rightarrow FT'$
 $T' \rightarrow *FT' \mid \epsilon$
 $F \rightarrow (E) \mid i$

CODE:

```
#include<stdio.h>
#include<string.h>
int E(),Edash(),T(),Tdash(),F();
char *ip;
char string[50];
int main()
{
    printf("Enter the string\n");
    scanf("%s",string);
    ip=string;
    printf("\n\nInput\tAction\n-----\n");
    if(E() && *ip=='\0'){
        printf("\n-----\n");
        printf("\n String is successfully parsed\n");
    }
    else{
        printf("\n-----\n");
        printf("Error in parsing String\n");
    }
}
int E()
{
    printf("%s\tE->TE' \n",ip);
    if(T())
    {
        if(Edash())
        {
            return 1;
        }
        else
        {
```

```
    return 0;
}
else
    return 0;
}
int Edash()
{
    if(*ip=='+')
    {
        printf("%s\tE'->+TE' \n",ip);
        ip++;
        if(T())
        {
            if(Edash())
            {
                return 1;
            }
            else
                return 0;
        }
        else
            return 0;
    }
    else
    {
        printf("%s\tE'->^ \n",ip);
        return 1;
    }
}
int T()
{
    printf("%s\tT->FT' \n",ip);
    if(F())
    {
        if(Tdash())
        {
            return 1;
        }
        else
            return 0;
    }
    else
        return 0;
}
```

```

}
int Tdash()
{
    if(*ip=='*')
    {
        printf("%s\tT'->*FT' \n",ip);
        ip++;
        if(F())
        {
            if(Tdash())
            {
                return 1;
            }
            else
                return 0;
        }
        else
            return 0;
    }
    else
    {
        printf("%s\tT'->^ \n",ip);
        return 1;
    }
}
int F()
{
    if(*ip=='(')
    {
        printf("%s\tF->(E) \n",ip);
        ip++;
        if(E())
        {
            if(*ip==')')
            {
                ip++;
                return 0;
            }
            else
                return 0;
        }
        else
            return 0;
    }
    else
        return 0;
}

```

```

}
else if(*ip=='i')
{
ip++;
printf("%s\tF->id \n",ip);
return 1;
}
else
return 0;
}

```

2. Construct Recursive Descent Parser for the grammar

$G = (\{S, L\}, \{ (,), a, , \}, \{ S \rightarrow (L) \mid a ; L \rightarrow L, S \mid S \}, S)$ and verify the acceptability of the following strings:

- i. (a,(a,a))
- ii. (a,((a,a),(a,a)))

CODE:

```

#include<stdio.h>
#include<string.h>
int S(),Ldash(),L();
char *ip;
char string[50];
int main()
{
    printf("Enter the string\n");
    scanf("%s",string);
    ip=string;
    printf("\n\nInput\t\tAction\n");
    if(S() && *ip=='\0')
    {
        printf("\n String is successfully parsed\n");
    }
    else
    {
        printf("Error in parsing String\n");
    }
}
int S()
{
    if(*ip=='(')

```

```

{
printf("%s\t\tS->(L) \n",ip);
ip++;
if(L())
{
    if(*ip=='')
    {
        ip++;
        return 1;
    }
    else
    {
        return 0;
    }
}
else
{
    return 0;
}
}
else if(*ip=='a')
{
ip++;
printf("%s\t\tS->a \n",ip);
return 1;
}
else
{
return 0;
}
}
int L()
{
printf("%s\t\tL->SL' \n",ip);
if(S())
{
if(Ldash())
{
return 1;
}
}
else
{
return 0;
}
}

```

```

    }
    }
    else
    {
        return 0;
    }
}
int Ldash()
{
    if(*ip==' ')
    {
        printf("%s\t\tL'->,SL' \n",ip);
        ip++;
        if(S())
        {
            if(Ldash())
            {
                return 1;
            }
            else
            {
                return 0;
            }
        }
        else
        {
            return 0;
        }
    }
    else
    {
        printf("%s\t\tL'->^ \n",ip);
        return 1;
    }
}
}

```

OUTPUTS:

Q1)

Test cases:

i+i*i	String is successfully parsed
i+i	String is successfully parsed
i*i	String is successfully parsed
i*i+i*i+i	String is successfully parsed
i+*+i	Error in parsing String
i+i*	Error in parsing String

Q2)

```
Enter the string
(a,(a,a))

Input      Action
(a,(a,a))  S->(L)
a,(a,a))   L->SL'
,(a,a))    S->a
,(a,a))    L'->,SL'
(a,a))     S->(L)
a,a))      L->SL'
,a))       S->a
,a))       L'->,SL'
))         S->a
))         L'->^
)          L'->^

String is successfully parsed
```

```
...Program finished with exit code 0
Press ENTER to exit console.
```

```
